Dick Smith colour computer

The Dick Smith VZ-200 personal computer features colour graphics, sound, Microsoft BASIC and both RF and video output.

Priced at only \$199, the VZ-200 has been specially designed for the computer beginner. It has 8K of RAM which can be easily expanded to 24K with the addition of the 16K memory expansion module.

The VZ-200 is a fully functional computer, so there's no extra equipment to buy. A comprehensive step-by-step instruction manual is included to teach you how to program in BASIC.

The keys on the typewriter-style movable-key keyboard have been specially designed so

that it's difficult to make a mistake. The number of switches and controls have been kept to a minimum.

The VZ-200 has the facility to attach cassette recorders in order to store programs on standard audio tape. The interface module, priced at \$49.50, allows the connection of a printer to the computer.

The VZ-200 is now available from any of the 37 Dick Smith Electronics stores Australia-wide.

The NewBrain is a brain wave

The NewBrain is a handheld computer measuring 280 mm x 150 mm x 50 mm into which it packs 32K of RAM and 29K of ROM.

This standard basic memory store can be expanded by plug-in modules to give a total of 2M.

There are dual 1200 baud cassette ports for connection to audio tape recorders, a CCITT compatible video output and a UHF channel output, as well as V24 compatible software-driven bi-directional and printer ports.

The battery safeguards the memory in the event of mains failure and allows the computer to be used as a portable instrument for 14 hours.

The NewBrain is manufactured by Grundy Business Systems Ltd, Cambridge Science Park, Milton Rd, Cambridge England.
